

SUPPORTIVE

Providing you with trusted quality is our priority, but our work does not stop there. Klerat's on-ground support team provides fast delivery and quality checks, ensuring the optimal delivery of the product such as:

Site visits to plantations

Fast supply during rodent outbreaks

Training from Syngenta team on Klerat's usage

Savings in time and resource by ensuring ease of use

FOR LIFE UNINTERRUPTED™

syngenta®

PRO TIPS

Commence baiting when fresh fruit damage is observed

Place 4g block at the base of each tree every 7 days until the full damage is below 20%

To ensure control of rodent population, two rounds of baiting are recommended per treatment

PROFESSIONAL PEST MANAGEMENT

PROVEN CONTROL

A highly-effective single-feed anti-coagulant rodenticide for plantation

USE BIOCIDES SAFELY. ALWAYS READ THE LABEL AND PRODUCT INFORMATION BEFORE USE.

PROVEN RODENT CONTROL

Oil palm is an important pillar within Southeast Asian communities. The region's natural diversity has prospered throughout history and has given rise to some of the world's largest agricultural exporters.

Naturally, with such diversity comes an array of pests that could devastate harvest and the livelihood of people. The consequence of rodent infestations, for instance, can claim up to 30%¹ of average yield on oil palm plantation each year in Indonesia.

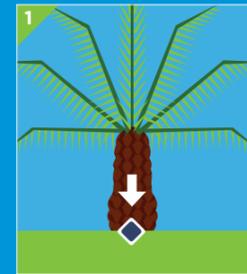

At Syngenta Professional Pest Management, we provide plantations with the tools to ensure that life prospers uninterrupted.

Klerat Waxblocks is a highly-effective and flexible single-feed rodenticide for agricultural estates such as oil palm plantations. With an exceptional success rate across the globe over the last 40 years, Klerat provides proven protection for oil palm plantations.

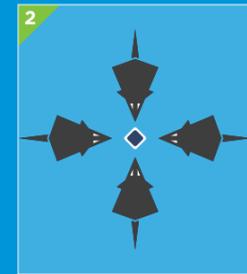

¹ Hafidzi & Saayon, 2001; Wood & Chung, 2003.

HOW IT WORKS

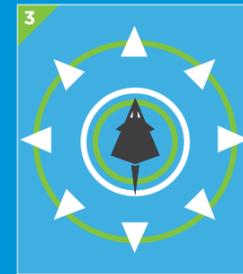

Klerat Waxblocks are manufactured with a fine particle matrix of ground high quality grains, cast in moulds with even distribution of the active ingredient and the bait. Leveraging the potency of brodifacoum, Klerat also controls resistant rodent populations, delivering exceptional results, every time. It works in three simple steps.

Klerat are placed at the base of the tree. These waxblocks are professionally designed to withstand the harsh tropical environment.

Klerat is highly palatable bait and attractive to rodents.

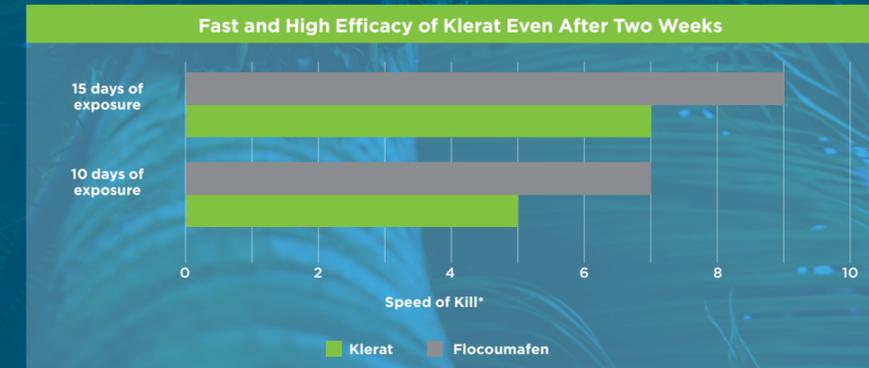

Lactating female rats that fed on Klerat will forage back to their nesting sites and pass the active to the young rats via lactation thus providing better control.

PROVEN CONTROL

Years of on-ground testing enables us to provide you with a product proven to eradicate rodent pests. Klerat ensures proven control:

- ▶ Tried and trusted for 40 years
- ▶ Proven control of rodent infestation within 7-14 days (2 rounds)
- ▶ High palatability
- ▶ Control of rodent population within two rounds of application

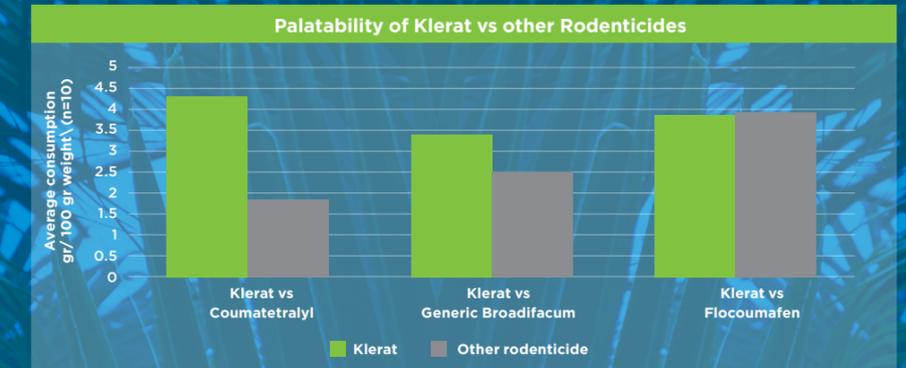

* Denotes the time (days) rat will die after consuming bait. Source: Bogor Agricultural University

EXPERT

Through decades of experience in rodent control, we work with a high degree of expertise to deliver a formulation, which uses the most effective methods available in the market to date.

- ▶ High quality Brodifacoum formulation
- ▶ Highly effective against rodents resistant to first generation rodenticides
- ▶ Single-feed effectiveness
- ▶ Active protection for at least 2 weeks
- ▶ Contain deterrent agents Bitrex
